

EMPOWERING SEAMLESS MOBILITY FOR ALL

▶ RIDES ON DEMAND

- Intermodal by Rides on Demand App!

Intermodal by Rides on Demand App offers a unified mobility solution designed to make every journey simple, efficient, and accessible. With **One App** for all riders, users can plan, book, and manage every aspect of their trip across multiple modes of transport without switching between platforms. This all-in-one approach streamlines the commuting experience, empowering agencies to deliver exceptional service.

Key requirements for Intermodal deployment: To implement Intermodal by Rides on Demand, agencies are required to meet certain prerequisites. The application is built to support a variety of data sources for its features. Agencies can easily implement the Demand Response component of Intermodal with the help of NovusDR or PASS, and agencies may have one of the following requirements when implementing the fixed route component of Intermodal through the Rides on Demand app.

REQUIREMENT

▶ Streets

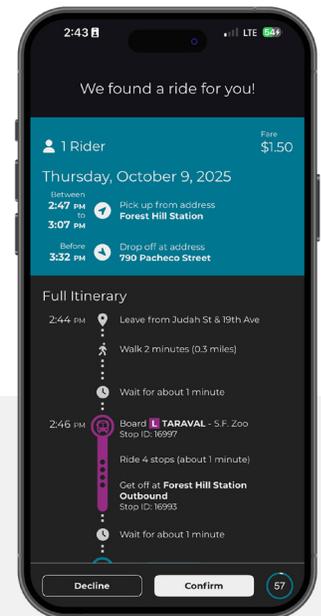

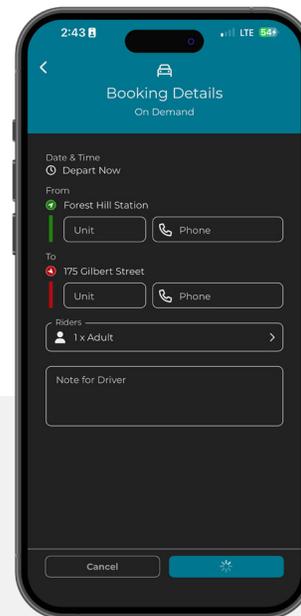

Integrates directly with infrastructure, making implementation smooth, scalable, and efficient

▶ GTFS-RT data from Friendly Fixed Route (FFR):

Allows agencies with a small Fixed Route system to consolidate Fixed Route and Demand Response into a single application without the need for Streets or a separate CAD/AVL system

▶ GTFS-RT data from existing CAD/AVL system:

Ensures riders stay informed and on track with accurate, up-to-the-minute information

SEAMLESS TRIP PLANNING

Intermodal by Rides on Demand App is redefining the way commuters navigate transit by offering a single, streamlined solution for journey planning, booking, and management. Because the app supports multiple GTFS feeds, users can easily organize every part of their trip, whether it involves fixed routes, paratransit, or microtransit, without the hassle of switching between software platforms. With just one app, users can plan complete journeys from start to finish, tailor travel preferences such as timing or walking distance, and receive timely, real-time notifications.

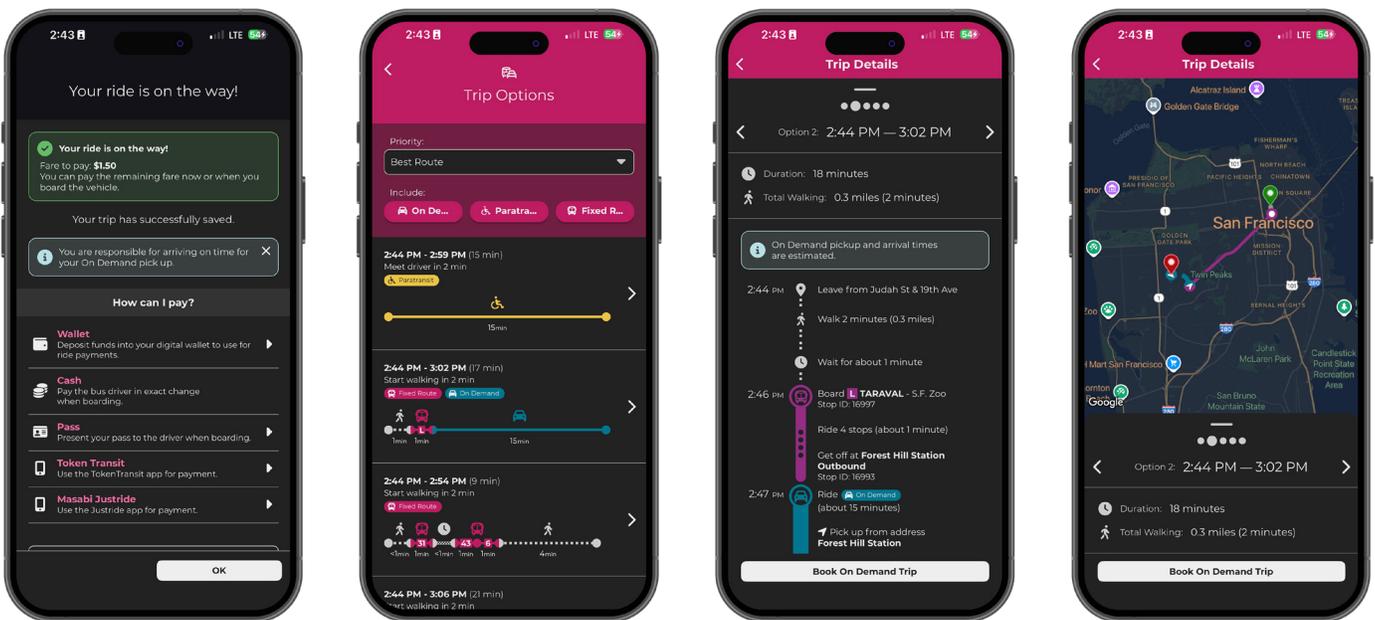

Riders can seamlessly combine microtransit and fixed-route services, or paratransit and fixed-route services, ensuring efficient travel from departure to arrival. Whether commuting daily or exploring new places, users benefit from comprehensive trip planning focused on their individual needs. Enhanced features like intermodal journey planning give commuters full control and

oversight of their travel, delivering a smoother, more convenient, and stress-free experience every time.

IMPROVED FLEET UTILIZATION AND OPERATIONAL EFFICIENCY

By integrating all services into one ecosystem, Intermodal by Rides on Demand optimizes fleet utilization and streamlines agency operations. Dispatchers can manage demand response and fixed route services more effectively, reducing unnecessary phone calls and simplifying the allocation of vehicles to meet dynamic demand.

This operational efficiency means agencies can improve service quality and reduce operational overhead. Real-time data integration facilitates agile decision-making, while a single source of truth for all trip data ensures accuracy and accountability throughout the system.

MOVING >> << TOGETHER

TripSpark Technologies is a transportation technology company focused on helping Fixed Route, Paratransit, Rideshare and private operators increase service and access to transportation, improve rider satisfaction, drive revenue, and overcome operational challenges. We are not just a vendor—we are your long-term strategic partner, offering the latest technologies and providing exceptional support.
